Speaker

Cheryl Adams

Senior Content Developer for SQL Machine Learning

Speaker Bio: Published Author, Sr.Data Architect with experience in Azure Government, AWS, and Google Cloud. Technical Evangelist and Conference speaker for wellness, Data and AI. Senior Content Developer for SQL Machine Learning.

Objective

- Understanding your relationship with data.
- Building a bridge to Machine Learning.
- Intro to Machine Learning Services.
- Demonstration.
- Learning path.
- Tools to build your own environment.
- Q&A

Terms

Python is an object-oriented, high-level programming language.

A **python package** is a collection of modules. When a module from an external package is required, it can be imported.

Azure Data Studio a portable data tool that uses notebooks based on SQL*, Python, Spark, or Scala. (*comparable to sql-extensions added to Visual Studio Code*)* Could replace SSMS(SQL Server Management Studio) in some cases.

Meetup link: meetup.com/Microsoft-Reactor-Abu-Dhabi

Packages

The **pandas** package is commonly use as a data analysis or manipulation tool. Pandas uses a dataframe(df) which is two-dimensional labeled data structure with columns. A good example of this is a spreadsheet or a table.

Pyodbc is the package used to connect to the SQL Database.

I will show you how these packages are added through the **Azure Data Studio** tool.

Microsoft Tools

Available for Download

Azure Data Studio with Python Kernel Installed

SQL Server 2019 Machine Learning Services for Windows

Sample data from Microsoft
